

From DILUS Instrumentación y Sistemas S.A.'s Quality and Environment Department we would like to inform you about our compromise to environmental performance:

Over the past years, our company has made significant efforts in environmental management and reduction of waste, which are fundamental pillars of our Quality and Environmental policy.

In 2019, there was a reform of our installations. We replaced the vast majority of our luminaires with energy-saving LED lights and our air conditioning with a high-efficiency air conditioning system.

The progressive digitalization of our processes has already manifested in a **reduction of paper waste (26,32% less) and toner waste (76,92% less)**, comparing data between 2021 and 2020.

Moreover, we continue working and promoting responsible environmental practices such as recycling or responsible resource consumption in order to fulfill our excellency objectives:

- Reduction of energy consumption by 2% in comparison to the previous year
- Reduction of gas consumption by 1% in comparison to the previous year

We would like to remark the importance that we give to the best use of energy and prime materials due to the significant impact to the environment. This success would not have been possible without the collaboration from our clients, partners and workers.
